2. Citations and explanations:

Claims 1-47 meet the criteria set out in PCT Article 33(2)-(3), because the prior art does not teach or fairly suggest a medical spirometer comprising a measurement unit which is disposed within the housing so as to form a bypass flow path defined between an outer surface of the measurement unit and an inner surface of the housing, and a measurement flow path defined through the fluidic jet oscillator, such that the total flow is divided into a bypass flow and a measurement flow.
